

# Key Takeaways

Three sessions. The data and strategy to move literacy forward at scale.

- Structured Literacy fits across Title I, Title II-A, Title III, and school improvement funds. No need to chase a single grant when **the science of reading strengthens every initiative you already run.**
- Educators in Loudoun County Public Schools achieved measurable adolescent literacy gains across 18 schools by building **intentional systems for coaching, data use, and professional learning,** and by collaborating consistently with Lexia's evaluation team.
- District leaders who invest in both professional learning and science of reading-aligned technology achieve the strongest, most durable literacy outcomes. AI-powered edtech can **support fidelity at scale without adding teacher burden.**

“

We need our coaches, our school building leaders and school district leaders to come arm in arm with our classroom teachers, so that when they are thinking about the data, when they're thinking about those instructional decisions, **they're not doing it in silos.**”

- Nicolas Cracco, Ed.D., City School District of New Rochelle
